

ES-FA / BTP Run Checklist

Local smoke run status

May 5, 2026

Latest Local Run

The latest smoke run completed locally from the project root with the wrapper `scripts/run_esfa_pipeline.ps1`. This run used `-SkipVivado` and `-SkipHardware`, so fresh hardware/Vivado execution is still pending.

Item	Status
Python environment	working from <code>.venv312</code>
Vivado path bootstrap	detected Vivado/xvlog installation
Baseline training	completed
Experiment: hardware-aware loss	completed
Experiment: adaptive dataflow	completed
Analysis plots/tables	completed
Evidence table generation	completed
Paper/output section generation	completed in <code>output/</code>
Fresh Vivado hardware build	skipped in this smoke run
KV260 physical board measurement	still pending

Current Numbers to Show

- Best run: `exp1_hardware_aware_loss`.
- Validation accuracy: 95.70%.
- Spike sparsity: 56.48%.
- Best energy proxy: 4,592,863.17.
- Baseline energy proxy: 22,604,295.76.
- Energy-proxy change vs baseline: -79.68%.
- Latest ranking compared 3 software runs.

Before Presentation

- Confirm `results/ranking_table.md` exists.

- Confirm plots exist in `results/plots/`.
- Confirm evidence files exist in `results/analysis/evidence/`.
- Confirm generated markdown exists in `output/`.
- Confirm presentation PDF exists: `output/presentation_ready_report.pdf`.
- Be clear that fresh hardware/Vivado execution was skipped in the smoke run.
